While the simultaneous test is known that the capital adequacy variable (X_1), liquidity risk (X_2) and interest rate risk (X_3) influence profitability (Y). The Adjusted R-squared value is 0.743539, this shows that the percentage contribution of the independent variables of capital adequacy (X_1), liquidity risk (X_2), and interest rate risk (X_3) is 74.3539% while the remaining 25,6461% is influenced by other factors. which were not included in this study.
