CHAPTER V

CONCLUSION AND SUGESTION

In this chapter, the researcher describes the conclusion based on the finding presents in previous chapter and also the researcher given some suggestions. The conclusion are drawn according to the results of this research, while suggestions are intended to give information for future researchers who interested in smellier research.

A. Conclusion

Based on the result of data analysis and findings, the researcher concluded that students had positive response (good) and support implementation of blended learning at English education study program. It showed that blended learning is an effective method for learning. so that blended learning can be applied and developed according to student needs.

The students feel comfortable of implemented of blended learning, because the application of blended learning provides a wider learning space for students. Using the blended learning model gives students the use of blended learning is believed to allow increased interaction and also improve the quality of meetings in order to create a space for more effective discussion with students and lecturers. blended learning allows students to explore learning materials using the internet, namely by utilizing personal devices for learning and application, social networking applications, and also social bookmarking to support the learning process, students become more flexible to access learning

materials so that students become more familiar with the material being taught given.

B. Suggestions

From this research the researcher suggests for teacher and also the students, the reader and for the future researcher.

1. For the Lecturer

   Blended Learning can be an alternative model for the learning process in English education. because blended learning can increase good discussion interactions between students and lecturers, blended learning can also maximize learning media to support the learning process so that students become more aware of the material presented.

2. For Other Researchers

   In this thesis, the researcher realizes that this research takes the population from the English Education Study Program and produces data already described above. Hopefully further research can continue this research in another department. So can get more variety of data, and it can be better suggestions for research at Baturaja University. In other words, other researchers can use this research as a reference to do their research.

3. For the TEFL

   The result in this research given a contribution to the developing of teaching and learning English as a foreign language.
